

## EDUCATION

One of the main activities of CEP Centro Español de Plásticos is the technical education in plastics.

All around the year a lot of courses are organized about specific subjects that are not common in the education market. These courses are taught by professionals with a wide and practical experience in the subject.

These courses tend to be short, with a practical intention and focused in a concrete technology. Our best warrant of quality is the list of our customers, companies that have used our educational services for more than forty years.

To get a calendar of the courses available, check the Spanish version of this web "Formación".

**We hope we can meet your company in one of our courses!!**
